**DETAILED ACTION*****Election/Restrictions***

1. Claims 5-12 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected inventions of Groups II and III, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on April 21, 2006.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Lichtenhan et al (5,412,053 and 5,589,562).

Lichtenhan et al teaches reacting a difunctional silsesquioxane monomer having a formula such as:

formula

X-M-X.

with a difunctional compound of the

, wherein the definitions for R, R<sup>2</sup> and R<sup>3</sup> can be found in column 4, wherein these are deemed to anticipate at least some of the definitions of claims 1-2. Claim 3 is met when a vinyl or allyl or other alkylene group is chosen per definitions found in column 4, which satisfied applicant's condition (ii). The examiner deems the reaction product anticipates applicant's instantly claimed general formula (1) with at least some of the corresponding definitions. For instance, the OSiR<sup>4</sup>R<sup>5</sup>R<sup>6</sup> as found in the above formula anticipates instant formula (IA) since the R<sup>4</sup>, R<sup>5</sup>, and R<sup>6</sup> can be monovalent constituents—see column 3, lines 65 to end. The reaction product of the above with the difunctional compounds is represented by the following formula (4). Wherein M can be selected from those found in column 3, lines 1-5. It is deemed that when M is Si (CH<sub>3</sub>)<sub>2</sub> or Si (CH<sub>3</sub>)<sub>2</sub> (CH<sub>2</sub>)<sub>2</sub>Si(CH<sub>3</sub>)<sub>3</sub> applicant's instant claim 1 is met (i.e., when either R<sup>15</sup> is a single bond, m is 0, and/or R<sup>16</sup> and R<sup>18</sup> are either single bonds or divalent organic groups). Lichtenhan et al teaches said reaction products can be used to produce thermal insulation or for protective coating among others—see column 3, lines 10-20. Therefore it is deemed that applicant's insulating-film forming material is anticipated by the reference.
